

# Sprinkler Escutcheons **PGSAFE**

## Description

PGSAFE sprinkler escutcheons are ornamental plates used with ½” NPT (or 15 mm BSP), and ¾” NPT (or 20 mm BSP) frame-style pendent and sidewall sprinklers. The escutcheons are installed between the sprinklers and the ceiling or wall for a pleasing appearance. They are available with several finish options to meet design requirements. Our escutcheons are made of stainless steel 304 to guarantee the aesthetics and good quality compared to other material such as chrome plated steel.

The PGSAFE adjustable and recessed escutcheons are made to allow for minor adjustments due to ceiling pitch. These escutcheons can be removed and reinstalled easily, allowing access above removable ceiling panels for servicing building equipment without shutting down the sprinkler system and removing the sprinkler.

The two-piece design of PGSAFE’s recessed and adjustable escutcheons allows installation and testing of the sprinklers prior to installing the ceiling or wall. PGSAFE’s Model ESD015 and ESD020 Escutcheons feature a slip-on design. The technicians are required to wear gloves while pushing the adapter into the outer cup to install quickly and easily.

# Fire Sprinkler Head Guard Cover for Sprinkler Head

## Features

These sturdy cages are designed to provide all the protection for sprinkler heads, while being open enough to allow for installation, removal, or work, and continuous functioning as needed.

Designed for sprinkler heads found in walls and ceilings within the fire suppression system line. Nice protective protectors.

The sprinkler head guards cover and protect sprinkler heads from inadvertent contact; It is important that the sprinkler heads remain untouched and safe.

The surface of the protective frame is electroplated and corrosion-resistant, ensuring long-lasting durability.

Universal, basically suitable for all sprinklers.
